

**Island**  
For MSPs

## A Better Way to Secure IT

### Start Delivering Secure IT

As your clients moved to the cloud, you modernized their tech. But user access still relies on tools and assumptions that haven't kept up with how people actually work today. You keep adding product after product to your stack just to stay ahead—but when does it end?

### Island for MSPs changes that.

It's a platform built around the last mile of work: the browser. Not a browser add-on, but a secure, policy controlled operating environment for how users work today.

### With Island for MSPs, you can:

- Eliminate layers of endpoint, network, and browser security
- Secure work from unmanaged devices
- Isolate and secure contractor access
- Protect critical systems with zero-trust controls
- Deliver differentiated, high margin managed services
- Eliminate the need for VPNs and infrastructure heavy remote access

# Island For MSPs

## Better Security. Fewer Tools.

### Key Use Cases:

#### **BYOD Security**

Provide secure access on personal devices without compromising user privacy

#### **A Browser for Work**

Purpose-built for security, control, privacy, productivity, and flexibility.

#### **VDI Replacement**

Replace costly, complex virtual desktops for a modern alternative users love

### What Makes Island for MSPs Different

- Consumption-based pricing – no minimums, no long term contracts
- Built-in multi-tenant management
- Compatible with any identity provider
- Works on any device – no VPN or infrastructure required
- Full visibility, auditing, and policy enforcement
- One platform to protect data and control access
