Island
For MSPs

A Modern OS for a Modern Stack

Your clients' systems live in the cloud now. But users are still running Windows with a start menu and local apps, just like they did 30 years ago.

IslandOS delivers the last mile of work the way it should be: secure by design, built for the cloud, and streamlined for users. It's a simpler, safer, smarter way to access modern IT.

What is IslandOS?

A turnkey subscription combining Island for MSPs and IGEL OS. Your clients get a secure, browser-based workspace. You get full multi-tenant management for both the browser and the OS. All the endpoint tools in your stack are no longer needed. And the attack surface gets much smaller.

Business Benefits:

- Extend life of aging hardware
- Eliminate the cost of new computer purchases
- Boost client retention with stickier services
- Sell a new IslandOS device as an **Islandbook**.

Operational Advantages:

- Secure by design, read-only OS with no local data
- No VPNs, patching, or endpoint tools needed
- Multi-tenant OS and browser management
- Consolidates your stack and reduces overhead

Why This Matters for MSPs

- Island's PWAs run like local apps
- Island homepage becomes the new desktop

- Fast browser performance, even on old devices
- Users can access WiFi, shut down, and work in Island. That's it.

> **"Instead of clients paying Dell and Microsoft, they now pay us monthly, and they save a ton of money. IslandOS made that happen."**
